

How to get FortiClient Offline installer for MacOS.

1. Download official Online installer from Fortinet website,
2. Mount DMG, and open FortiClientInstaller.app

3. Wait until FortiClient will be downloaded,
4. Open Activity Monitor and find the FortiClientInstaller process,
5. Click the "i" icon

6. Open Finder and go to the Path from Executable Path before “AppTranslocation”. In my example it will be /private/var/folders/jj/s1gn6jb11x31z0gj0q_zx4m0000gq/T/
7. And finally, the Offline Installer can be found in the “fcupdate” folder”.
